

Case Study Forecourt Cleaning

Client:	BP Retail
Location:	Nationwide
Overview:	To clean and degrease petrol forecourts and all adjacent areas of diesel, petrol and oil.
Products used:	FleetKleen – Bioremedial Cleaner/Degreaser
Method of cleaning:	Saturation Pressure washing

Overview

With help from SpillAway, TBS Bio-Services won the contract for the cleaning and degreasing of all BP Connect petrol forecourts (in excess of 400) throughout England. As part of the contract, FleetKleen Bioremedial Cleaner/Degreaser is used at all sites as it not only offers unparalleled cleaning, but is 100% safe to use and helps bioremediate and reduce waste in underground interceptor sewers, helping reduce hazardous waste charges.

FleetKleen is applied directly to the petrol forecourt through sprayers and is then allowed to sit for 15 minutes so that it can “chase” oil and diesel into porous surfaces. The area is then washed down using a pressure washer, leaving a completely cleansed and residue free surface. The products can be used on all surfaces, including block paving, concrete and asphalt. The success of FleetKleen has led to BP Retail equipping all Connect sites with the product for stain removal and the cleaning of sand used for spill absorption on forecourts, allowing for re-use of sand and further cutting hazardous waste costs.
